

Ji-Bin Peng, PhD

Associate Professor

Department of Medicine, Division of
Nephrology
ZRB 634 Zip 0007
Phone: 205-975-6130

Dr. Peng received his Ph.D. degree from Shanghai Institute of Cell Biology of the Chinese Academy of Sciences. Dr. Peng had his postdoctoral training at Brigham & Women's Hospital and Harvard Medical School during 1997 to 2000 (Mentored by Drs. Matthias Hediger and Edward Brown). He became an Instructor in Medicine at Harvard Medical School in 2000. Dr. Peng joined the University of Alabama at Birmingham (UAB) as an Assistant Professor in 2003. He is currently an Associate Professor of Medicine at UAB.

Research/Clinical Interest

Calcium transport proteins and their roles in health and disease

Research in Dr. Peng's laboratory is centered on the mechanism and regulation of calcium transport pathways. Calcium is a major inorganic component of the skeleton and serves as a key extracellular and intracellular messenger. Intestinal absorption and renal reabsorption of calcium play crucial roles in maintaining calcium balance of the body. Defects in calcium transport may result in disorders such as kidney stone disease and osteoporosis. Towards a better understanding of calcium transport and its relation to hypercalciuria and hypertension, Dr. Peng's laboratory is investigating molecular mechanisms of calcium absorption and reabsorption. Two calcium channels, TRPV5 and TRPV6, are the focus of current investigation. Dr. Peng's group is also working on the mechanisms of WNK4 kinase activation by calcium ions. WNK4 is a protein kinase linked to pseudohypoaldosteronism type II, a genetic form of hypertension. It is expected that those studies will lead to novel therapeutic strategies for hypercalciuria and hypertension.
